

Дневен бюлетин за прогнозирани водни количества за водосбора на
р. Струма
Daily bulletin 10.01.2025

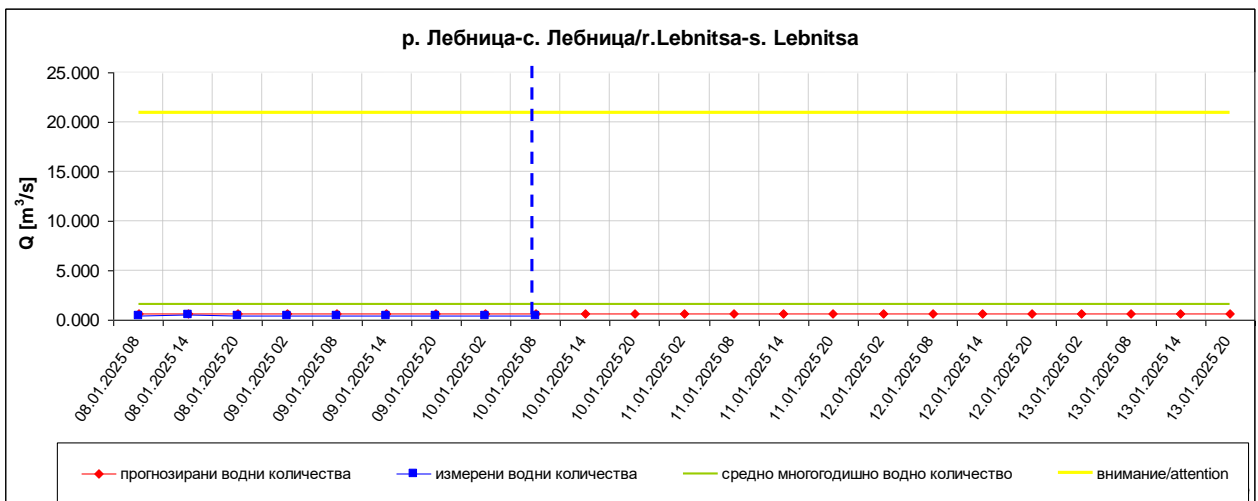

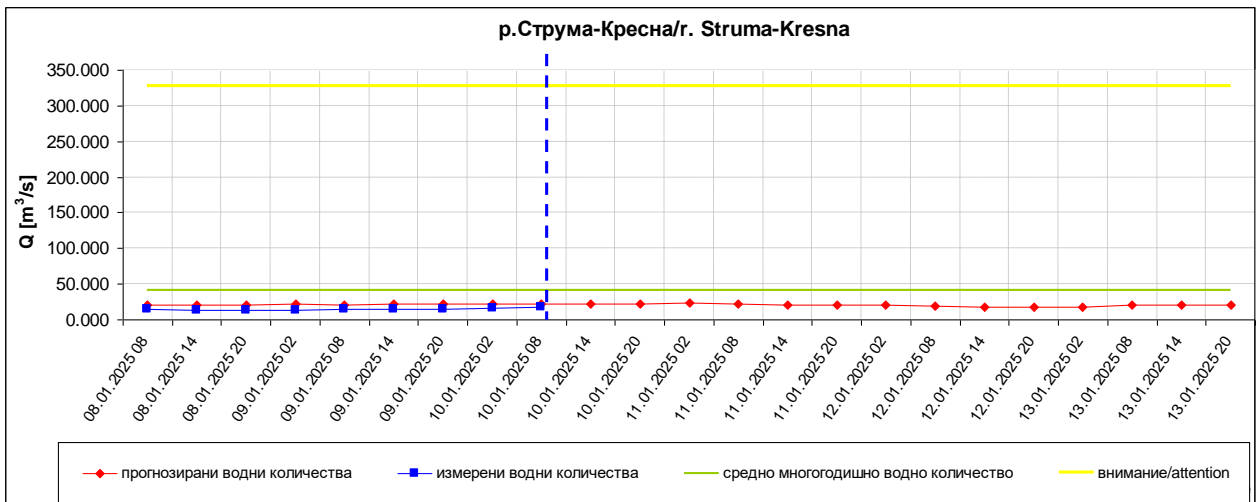

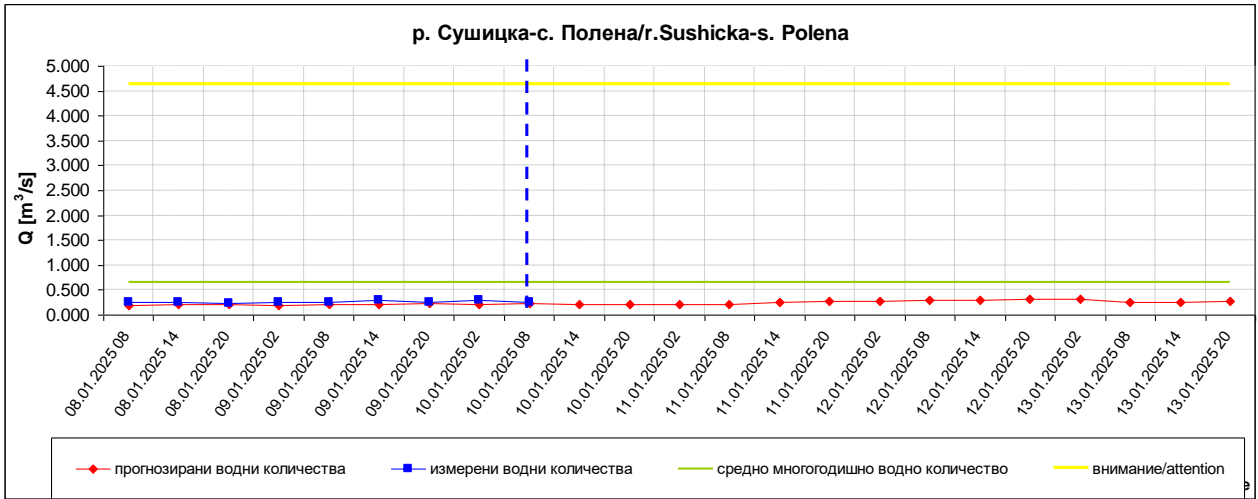

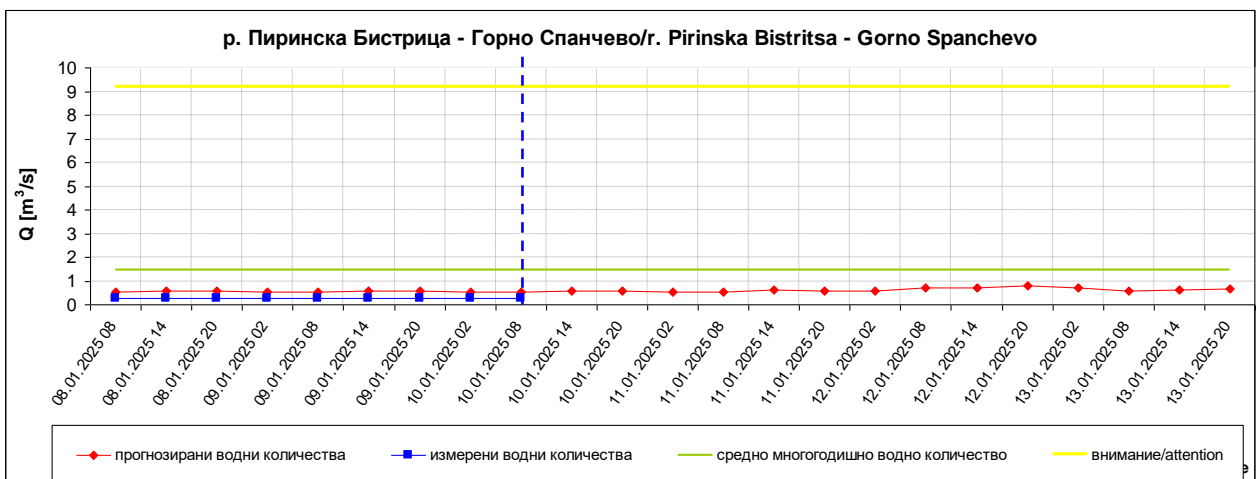

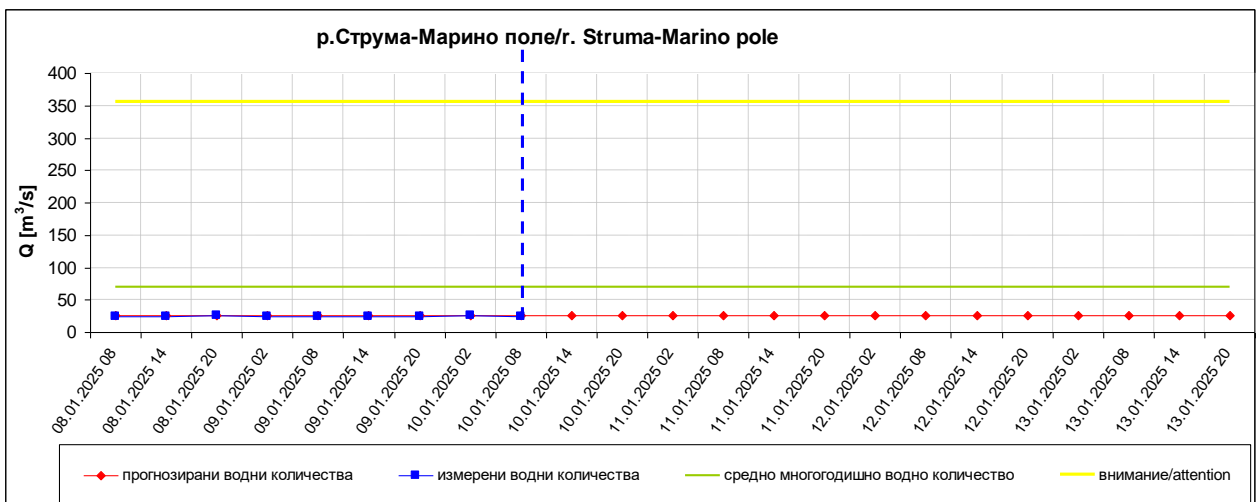

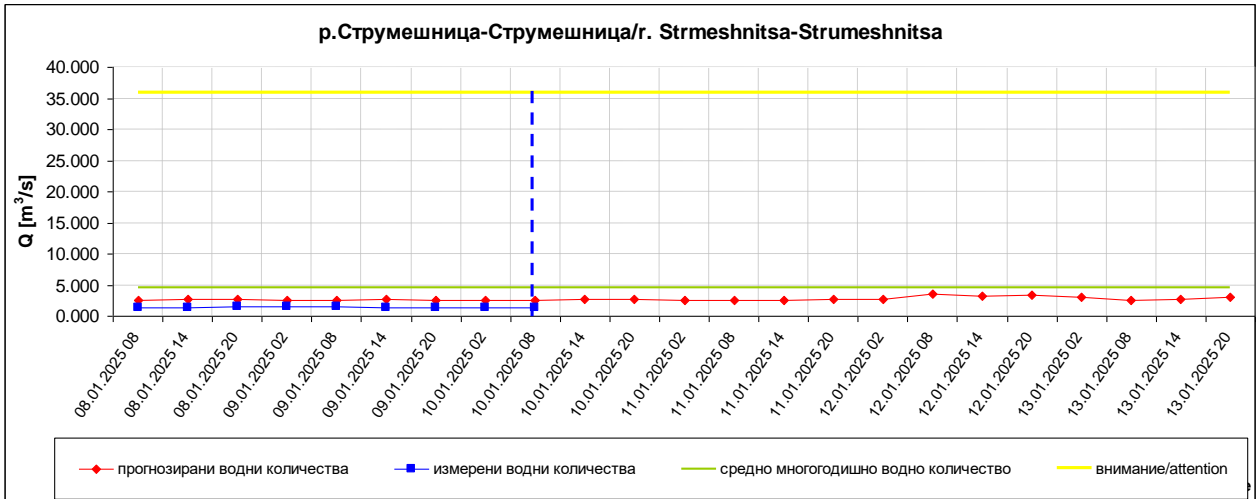

НАЦИОНАЛЕН ИНСТИТУТ ПО МЕТЕОРОЛОГИЯ И ХИДРОЛОГИЯ

Коментар: Прогнозираните водни количества на 11, 12 и 13.01.2025 г. ще бъдат около и под средномногогодишните. Днес (10.01) и през следващите три дни речните нива ще останат без съществени изменения. В резултат на частично снеготопене ще има краткотрайни повишения на нивата в планинската част от водосбора, както и в средното и долното течение на основната река. Водните количества ще бъдат под праговете за внимание.

Comment: The forecasted discharges for 11, 12 and 13.01.2025 will be around and below the average annual value. Discharges will be below the attention level.

В направените прогнози не се отчита работата и ретензионната способност на хидротехническите съоръжения.
