Коментар: Прогнозираните водни количества на 07, 08 и 09.03.2026 г. ще бъдат около и над средномногогодишните. Днес (06.03) и през следващите три дни речните нива ще останат без съществени изменения, като в резултат на снеготопене, в обедните и следобедните часове, се очакват краткотрайни повишения в планинските части от водосбора. Водните количества ще бъдат под праговете за внимание.

Comment: The forecasted discharges for 07, 08 and 09.03.2026 will be around and above the average annual value. Discharges will be below the attention level.

В направените прогнози не се отчита работата и ретензионната способност на хидротехническите съоръжения.
